

Preschool Newsletter 9/4/17~9/8/17

The group is working together to tilt the pool and paint the paper by rolling the balls.

Last week, the children worked with partners to create a ball art painting. This week, each small group created their circular painting together. The children had to communicate to make the balls move in the right direction. Within the opportunities presented to the children are many that involve the group. Parachute play is not possible without multiple people; circle games like ring-around-the-rosie work better with more friends. Our children are beginning to build a sense of community within the classroom. This is the precursor to implementing long-term projects in which all children play an active role and participate as a contributing member of the classroom. Many families have already brought in their framed family picture which we have displayed around the room. We would love to add your family to the classroom as this helps to build a sense of belonging for your child. Please bring in a framed family picture as soon as possible.

Uncle Troy introduces Skelereena

We invited an X-ray technician named uncle Troy to visit the children. He shared about his job showing them pictures of inside his body. one of our friends recently had an X-ray and we have an X-ray machine in our dramatic play doctor. Troy also brought interesting items for the children to look at and interact with. He brought barium, which was like slime. He also brought large syringes and magnets. After he left, the children played with magnets that we have. They noticed that one side attracts and one side repels. They also noticed that the magnet picks up some items but not others. We are so fortunate to have such interesting guests That also support our learning and curriculum. Thanks Uncle Troy!
